

OVERVIEW

We have come a long way:

Basics and Combinatorics

What are random variables?

pmf (discrete)  
pdf (continuous)

CDF MGF

Cumulative distribution function.

Conditional probability and independence

$P(A|B) = P(AB)/P(B)$

Bayes Rule.

Weird examples

Monty Hall

Birthday problem

Dependent RVs

tables  
Joint pmf, pdf, cdf

Double integration

integrating joint pdf over areas gave probabilities.

Covariance and correlation

$Cov(X, Y)$

$Corr(X, Y)$

Sample spaces  
Rules of prob.

Events, Unions, complements, Intersections, inclusion/exclusion

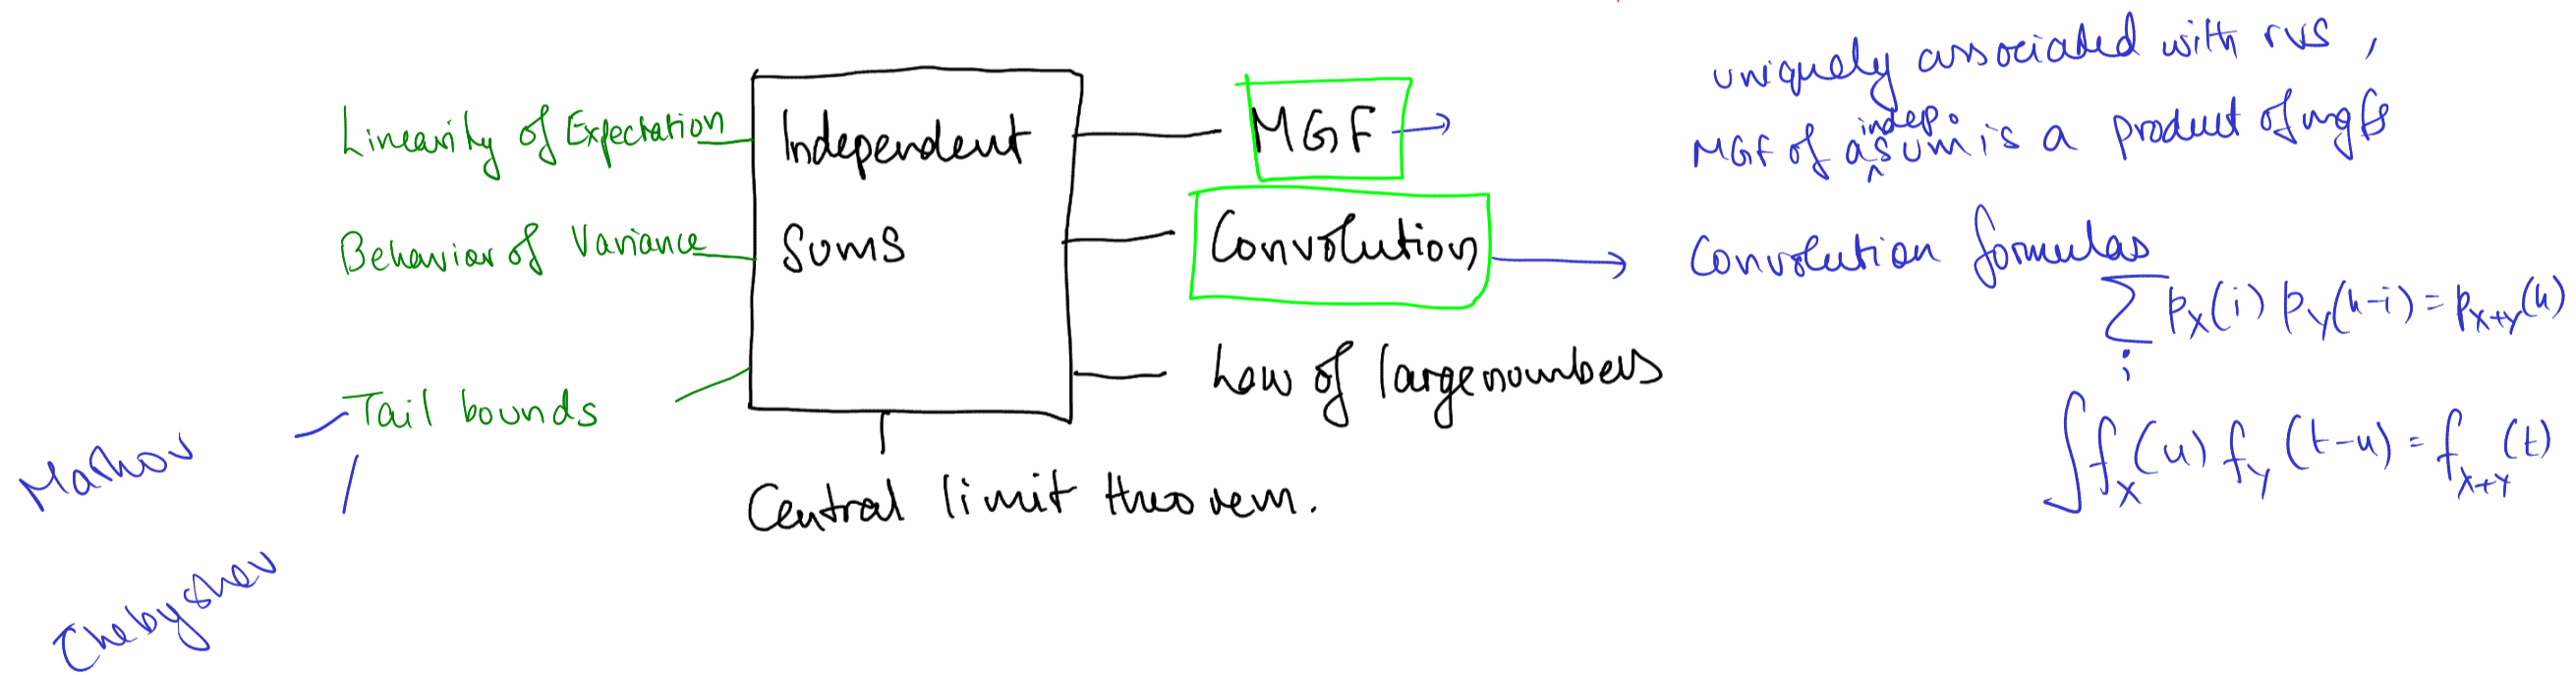

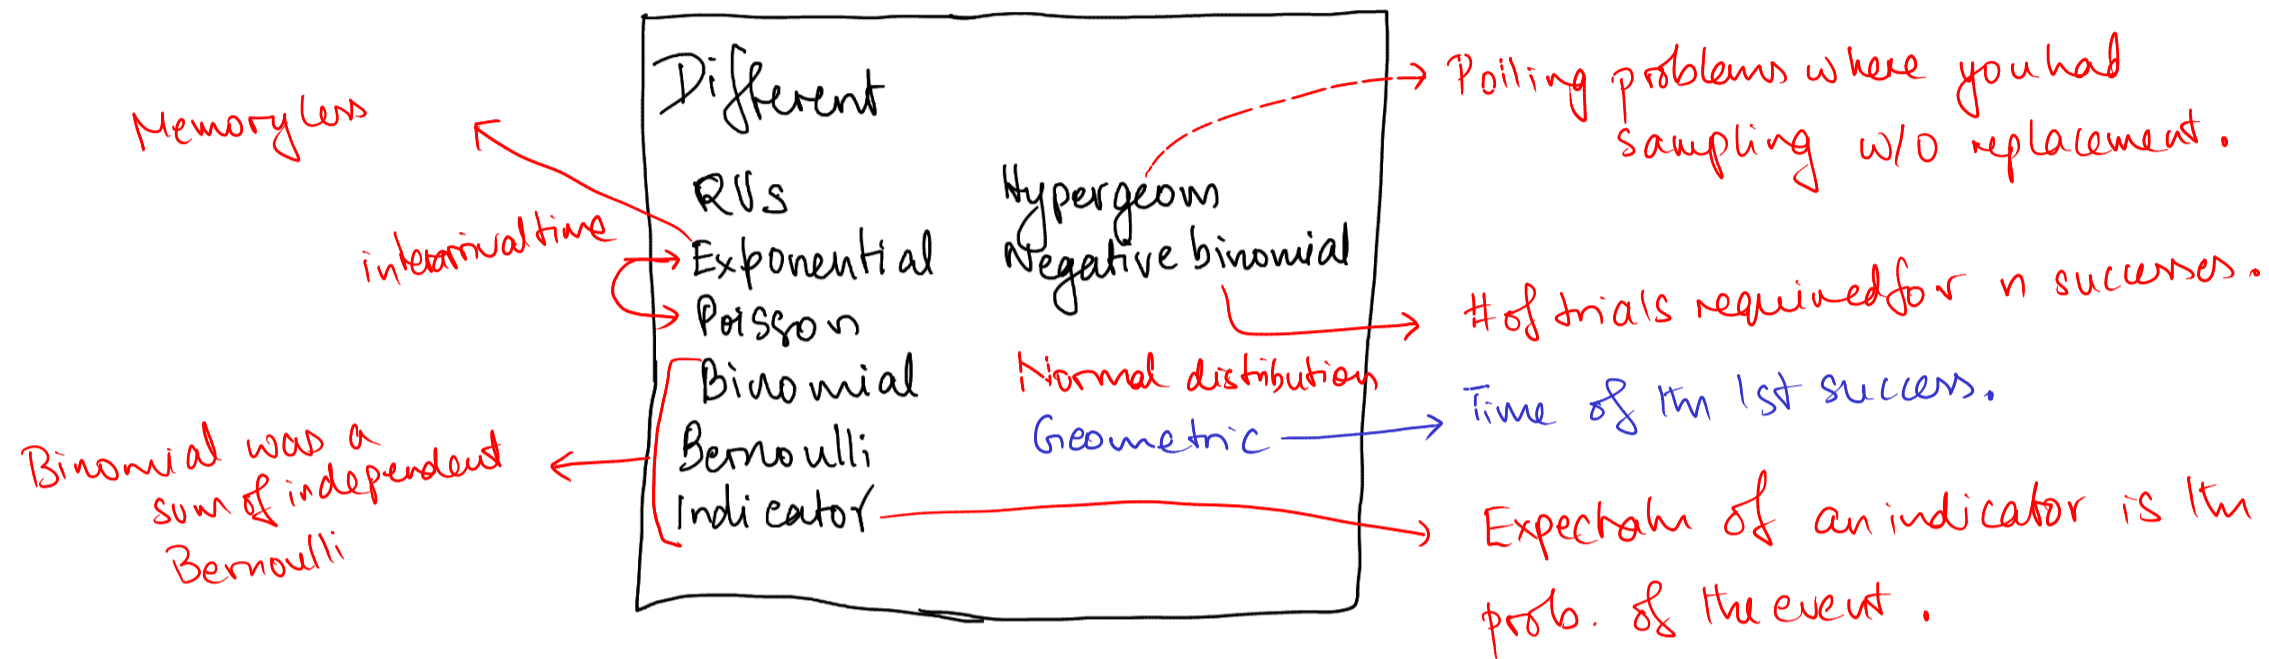

Binomial coeff, Permutations, combinations, factorials, cartesian products

$P(A|B) = P(A)$   
 $\Leftrightarrow P(A \cap B) = P(A)P(B)$

marginals & joints. Joint & cdfs (using area)

Set up.

do an extra problem.

★ - Problems to do for review
